Title: Molecular cloning, characterization, and chromosomal localization of a novel printer molecular cloning, characterization, and chromosomal localization of a novel printer molecular cloning, translated from GB/EMBL/DDBJ

Status: preliminary; translated from GB/EMBL/DDBJ

Molecule type: mRNA

Residues: 1-216, LTGVRKAA,,225-260,'G',262-285,'GTEGGLDASNTERSBA',302,'S',304,'TAPVHDB

Cross-references: GB:D37781; NID:g633072; PIDN:BAA07035.1; PID:g633073

Comment: Enhanced expression of this protein with increasing cell density suggests a reconstruction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         "Bescription: catalyzes hydrolysis of peptidyl-phosphotyrosine to peptidyl-tyrosine and 'Superfamily: protein-tyrosine-phosphatase, receptor type j; fibronectin type III repea 'Reywords: glycoprotein; phosphoric monoester hydrolase; receptor; tran. 1.35/Domain: signal sequence #status predicted <SIG. 1337/Product: protein-tyrosine-phosphatase, receptor type J #status predicted <MAT>:18-197/Domain: fibronectin type III repeat homology <3FNA>:206-283/Domain: fibronectin type III repeat homology #status atypical <3FNC>:365-445/Domain: fibronectin type III repeat homology %3FND>:355-445/Domain: fibronectin type III repeat homology <3FND>:355-417/Domain: fibronectin type III repeat homology <3FNB>:353-617/Domain: fibronectin type III repeat homology <3FNB>:720-2804/Domain: fibronectin type III repeat homology <3FNB>:720-804/Domain: fibronectin type III repeat homology <3FNB>:720-808/Domain: fibronectin type III repeat homology <70-808/Domain: fibron

A; Title: Structural diversity and evolution of human receptor-like protein tyrosine phoses A; Reference number: S12049; MUID:91006018; PMID:2170109
A; Accession: S12052
A; Status: preliminary
A; Molecule type: mRNA
A; Residues: 390-1912 (xRU-)
A; Note: the sequence from Fig. 5B is inconsistent with that from Fig. 5A in having 568-T
B; Adadhi, M.; Sekiya, M.; Arianra, Y.; Takekawa, M.; Itoh, F.; Hinoda, Y.; Imai, K.; Yac
Cancer Res. 52, 77-740, 1992
A; Note: the sequence from Fig. 5B is inconsistent with that from Fig. 5A in having 568-T

Keywords: phosphoprotein

225-304/Domain: protein 4.1 membrane-binding domain homology < 2841>
225-304/Domain: protein-tyrosine-phosphatase homology < PTP2>

1110/Active site: Cys (phosphocysteine intermediate) #status predicted

1116/Binding site: substrate phosphate (Arg) #status predicted

I "Pez: a novel human cDNA encoding protein tyrosine phosphatase- and
ezrin-like domains.";
Blochem. Blophys. Rev. Commun. 209:959-965(1995).
-!- CATALYTIC ACTIVITY: Protein tyrosine phosphate + H(2)O = protein
tyrosine + phosphate.
-!- TISSUE SPECIFICITY: Expressed in a variety of human tissues
including kidney, skeletal muscle, lung and placenta.
-!- SIMILARITY: Belongs to the protein-tyrosine phosphatase family.
-!- SIMILARITY: Belongs to the protein-tyrosine phosphatase family.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 cytoskeleton.
-!- CATALYTIC ACTIVITY: Protein tyrosine phosphate + H(2)0 = protein tyrosine + phosphate.
-!- SUBCELLULAR LOCATION: Cytoplasmic.
-!- SUMILARITY: Belongs to the protein-tyrosine phosphatase family.
-!- SIMILARITY: Contains 1 PERM domain.
-!- SIMILARITY: Contains 1 PERM domain.

Savada M., Ogata M., Fujino Y., Hamaoka T.;
Cobrox cloning of a novel protein tyrosine phosphatase with homology
to cytoskeletal protein 4.1 and its expression in T-lineage cells.";
Biochem. Biophys. Res. Commun. 203:479-484(1994).
-!- FUNCTION: MAY BE INVOLVED IN THE REGULATION OF T CELL DEVELOPMENT
-!- CATALITIC ACTIVITY: Protein tyrosine phosphate + H(2)0 = protein
                                                                                                                                                                                                                                                                                                                                        tyrosine + phosphate.

TISSUE SPECIFICITY: Thymus; in cells of both hematopoietic and non-hematopoietic origins.
SIMILARITY: Contains 1 FERM Gomain.
SIMILARITY: Belongs to the protein-tyrosine phosphatase family.
Non-receptor class subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            153, Indels 182;

PTM: A CLEAVAGE OCCURS THAT SEPARATES THE EXTRACELLULAR DOWAIN FROM THE TRANSMEMBRANE SEGMEN.
SIMILARITY: Contains 3 immunoglobulin-like C2-type domains.
SIMILARITY: Contains 8 fibronectin type III domains.
SIMILARITY: Contains 2 protein-tyrosine phosphatase domains.
                                                                                                                                                                                                                                                                                                                                                                              01-NOV-1991 (Rel. 20, Created)

-!- FUNCTION: May be involved in the regulation of growth and differentiation of liver cells.
-!- CATALYTIC ACTIVITY: Protein tyrosine phosphate + H(2)0 = protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               tyrosine + phosphate.
-!- TISSUB SPECIFICITY: Liver.
-!- SIMILARITY: Contains 1 FERM domain.
-!- SIMILARITY: Belongs to the protein-tyrosine phosphatase family.
Non-receptor class subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Craniata, Vertebrata, Euteleostomi,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        tyrosine + phosphate.
-!- SIMILARITY: Contains 1 FERM domain.
-!- SIMILARITY: Contains 1 PDZ/DHR domain.
-!- SIMILARITY: Belongs to the protein-tyrosine phosphatase family.
Non-receptor class subfamily.

1 ISSUE SPECIFICITY: Expression is restricted to the CNS.

Distributed throughout the brain and spinal cond.

1 DEVELOPMENTAL STAGE: Exceptionally high levels found in the cortex and olfactory bulbs during perinatal development and are downregulated during postnatal week 2. Expression in the cereballar cortex is restricted to the granule cell layer of lobules 1-6.

Anterior and posterior compartments become discernible only during postnatal weeks 2 and 6.

1 SIMIARITY: Contains 1 MAM domain.

2 SIMIARITY: Contains 2 immunoglobulin-like C2-type domain.

3 SIMIARITY: Contains 4 fibronectin type III domains.

3 INIARITY: Contains 2 protein-tyrosine phosphatase domains.
                                                                                                                                                                                                                                                                                                               SEQUENCE FROM N.A. (ISOFORMS 3 AND 4).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          TISOId=014522-2; Sequence=VSP 007802;
TISOIG SPECIFICITY: Expression—is restricted to the CNS.
SINILARITY: Contains 1 MAM domain.
SIMILARITY: Contains 1 immunoglobulin-like C2-type domain.
SIMILARITY: Contains 4 fibronectin type III domains.
SIMILARITY: Contains 2 protein-tyrosine phosphatase domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                suitable for analysis of cDNA clones encoding relatively large

           tyrosine + phosphate.
SUBCELLULAR LOCATION: Type I membrane protein.
SIMILARITY: Contains I protein-tyrosine phosphatase domain.
SIMILARITY: Contains 16 fibronectin type III domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                PROTEIN-TYROSINE PHOSPHATASE BETA.

-- SUBCELLULAR LOCATION: Type I membrane protein.
-- TISSUE SPECIPICITY: Expressed in every tissue examined.
-- SIMILARITY: Contains I protein-tyrosine phosphatase domain.
-- SIMILARITY: Contains 6 fibronectin type III domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   STRAIN=MRL-LPR/LPR;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ESULT 13
